Teacher Record Management System

Project Report

Submitted in partial fulfilment of the requirement for the award of

Degree of

MASTER OF COMPUTER APPLICATION

PROJECT GUIDE: SUBMITTED BY:

Ms. Shalini Chawla Mam   **Rakhi Agrahari (K24147)**

SCHOOL OF COMPUTER APPLICATION AND TECHNOLOGY

CAREER POINT UNIVERSITY, KOTA

Minor Project (CAD851)

May, 2024

ACKNOWLEDGEMENT

We would like to express our sincere appreciation to everyone who contributed to the development and success of the Teacher record Management System project. Their dedication, expertise, and support played a crucial role.

Project Team Rakhi Agrahari: Project Manager and Lead Developer.

User Testing and Feedback:

We extend our gratitude to the recruiters, hiring managers, and other users who actively participated in the testing and provided valuable feedback.

Your insights were instrumental in refining the features and ensuring a user-friendly experience.

Open-Source Community:

We would like to acknowledge the open-source community and the developers behind the libraries and frameworks that were instrumental in the development of the Teacher record Management System.

Inspirational Support:

Special thanks to Ms. Shalini Chawla Mam for their guidance, mentorship, and inspirational support throughout the project's lifecycle.
Users of the Application:

Thank you for being part of this exciting journey

Rakhi Agrahari

Place: Kota, Rajasthan

Date: 25/May/2024

<u>DECLARATION</u>

We hereby declare that this Project Report titled **Teacher Record Management System** submitted by us and approved by our project guide, the School of Computer Application and Technology (SOCA), Career Point University, Kota is a Bonafide work undertaken by us and it is not submitted to any other University or Institution for the award of any degree diploma / certificate or published any time before.

Project Name: Teacher Record Management System

Student Name: Rakhi Agrahari   Signature

Project Guide: Ms. Shalini Chawla   Signature

Teacher Record Management System

2. Problem Statement

Background

The main problem statement for a Teacher Record Management System (TRMS) is to systematically record, store and update teacher records in an efficient manner. Some key points:

- **Automation and Productivity**

Pros:

- Automates manual processes, saving time and effort.

- Improves overall productivity of the school and teachers.

- Enables easier updating of information.

Cons:

- Requires initial investment in software and training.

- Potential resistance to change from some teachers.

- **Online Access and Searching**

Pros:

- Allows searching for teachers online by subject and requirements.

- Provides a centralized database of teacher records.

- Saves time compared to manual searching.

Cons:

- Requires stable internet connectivity.

- Potential privacy and security concerns with online data.

- **Admin and User Modules**

Pros:

- Provides appropriate access to authorized users.

- Admin can efficiently manage subjects, teachers, reports, profiles.

- Users can easily search for teachers by subject.

Cons:

- Requires defining and maintaining user permissions.

- Potential for conflicts between admin and user needs.

- **Web-based Implementation**

Pros:

- Accessible from anywhere with internet.

- Provides a friendly graphical user interface.

- Uses popular technologies like PHP and MySQL Database.

Cons:

- Requires web server setup and maintenance.

- Potential compatibility issues across different browsers.

- **Benefits to Schools and Teachers**

Pros:

- Frees up time for teachers to focus on students.

- Enables easy communication between teachers and students.

- Provides automatic data processing for record keeping.

Cons:

- Requires change in existing school processes.

- Potential resistance from teachers uncomfortable with technology.

By carefully considering these topics and their pros and cons, schools can make informed decisions when implementing a TRMS to efficiently manage teacher records and improve overall productivity.

3. Project Description

The Teacher Record Management System (TRMS) is a comprehensive web-based solution designed to simplify the process of managing teacher records. It provides an easy-to-use platform that allows users to search and manage teacher records with ease, making it accessible to individuals with varying levels of computer literacy. The system is designed to address the needs of both individuals and schools, offering an efficient and effective way to manage teacher records.

3.1 Scope of Work

In Scope

- The scope of the **Teacher Record Management System** includes:
  - o Developing a **web application** that allows users to search for teachers online.
  - o Providing a platform for schools to **maintain teacher records**.
  - o Enabling users to find suitable teachers based on their requirement

1. **User Interface (UI) Design:**
   - o Create an intuitive and visually appealing interface.
   - o Use a responsive design to ensure it works well on various devices (desktops, tablets, and mobiles).
   - o Consider color schemes, fonts, and layout to enhance usability.
2. **Navigation and Flow:**
   - o Plan the navigation flow logically. Users should easily find what they need.
   - o Implement breadcrumbs, menus, and clear calls-to-action (CTAs).

3. **Authentication and Authorization:**
   - ○ Implement secure user authentication (e.g., using OAuth, JWT, or session-based authentication).
   - ○ Define user roles (e.g., admin, teacher, student) and set appropriate permissions.
4. **Search and Filters:**
   - ○ Allow users to search for teachers based on criteria (subject, location, experience, etc.).
   - ○ Implement filters to refine search results.
5. **Teacher Profiles:**
   - ○ Each teacher should have a detailed profile.
   - ○ Include information like qualifications, experience, subjects taught, and availability.
6. **Record Management:**
   - ○ Enable teachers and administrators to update their profiles.
   - ○ Implement CRUD (Create, Read, Update, Delete) operations for teacher records.
7. **Feedback and Ratings:**
   - ○ Allow students to provide feedback and ratings for teachers.
   - ○ Display average ratings on teacher profiles.
8. **Notifications:**
   - ○ Send notifications for profile updates, new teacher registrations, etc.
   - ○ Use email or in-app notifications.
9. **Testing and Quality Assurance:**
   - ○ Thoroughly test the application across browsers and devices.
   - ○ Check for usability, performance, and security issues.
10. **Deployment and Maintenance:**
    - ○ Choose a reliable hosting service (e.g., AWS, Heroku, or Azure).
    - ○ Regularly update the application with bug fixes and new features.

3.2 Structure of the Project

Teacher Record Management System project is developed as a web application and it will work over web to search teacher online according to their subjects.

Project Modules:

- ○ **Dashboard:** In this section admin can briefly view total number of subjects and total number of teachers.
- ○ **Subjects:** In this section, admin can manage the Subjects (add/update).

- o **Teachers:** In this section, admin can add new teachers and manage the details of old teachers.
- o **Search:** In this section, admin can search teachers by using teacher name.
- o **Report:** In this section, admin can view the number of teachers added in particular periods.
- o **Profile:** In this section admin can update his/her profile. Change Password: In this section admin can change his/her own
- o **passwords Logout:** Through this button admin can logout.
- o **Forgot Password:** In this section, admin can reset his/her password by using registered email id and contact number.
- o **Users:** Users can search for the teachers by entering the subject name.

3.2 Modules in Brief

1. **Admin Module:**
   - o Manages subjects, teachers, reports, profiles, and passwords.
   - o Provides an interface for searching teachers and generating reports.
2. **User Module:**
   - o Enables users to search for teachers based on subjects.
   - o Facilitates easy access to teacher information.

3.3 Context Diagram (High Level)

System Architecture:

A High-level context diagram for the Teacher Record Management System project would illustrate the system's interactions with external entities.
It would typically show the system at the center, surrounded by external entities like users, admins, databases, and other systems it interacts with.
This diagram provides a visual representation of how the TRMS project interfaces with its environment, showcasing the flow of information and interactions between different components.

➢ **Data Flow Diagram (DFD-0)**

The DFD takes an input-process-output view of a system i.e. data objects flow into the software, are transformed by processing elements, and resultant data objects flow out of the software.

Data objects represented by labeled arrows and transformation are represented by circles also called as bubbles. DFD is presented in a hierarchical fashion i.e. the first data flow model represents the system as a whole. Subsequent DFD refine the context diagram (level 0 DFD), providing increasing details with each subsequent level.

The DFD enables the software engineer to develop models of the information domain & functional domain at the same time.

As the DFD is refined into greater levels of details, the analyst perform an implicit functional decomposition of the system. At the same time, the DFD refinement results in a corresponding refinement of the data as it moves through the process that embody the applications.

A context-level DFD for the system the primary external entities produce information for use by the system and consume information generated by the system. The labeled arrow represents data objects or object hierarchy.

RULES FOR DFD:

• Fix the scope of the system by means of context diagrams.

• Organize the DFD so that the main sequence of the actions

• Reads left to right and top to bottom.

 • Identify all inputs and outputs.

 • Identify and label each process internal to the system with Rounded circles.

 • A process is required for all the data transformation and Transfers. Therefore, never connect a data store to a data Source or the destinations or another data store with just a Data flow arrow.

• Do not indicate hardware and ignore control information.

• Make sure the names of the processes accurately convey everything the process is done.

• There must not be unnamed process. TEACHER RECORD MANAGEMENT SYSTEM 6 DEPT OF COMPUTER APPLICATION-RNSFGC

• Indicate external sources and destinations of the data, with Squares.

• Number each occurrence of repeated external entities.

• Identify all data flows for each process step, except simple Record retrievals. • Label data flow on each arrow.

• Use details flow on each arrow.

• Use the details flow arrow to indicate data movements
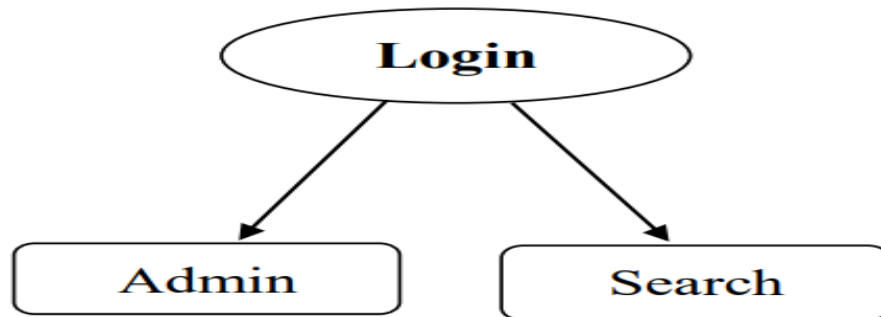

DFD Level-0

ER diagram

An Entity–relationship model (ER model) describes the structure of a database with the help of a diagram, which is known as Entity Relationship Diagram (ER Diagram). An ER model is a design or blueprint of a database that can later be implemented as a database.

The main components of E-R model are: entity set, and relationship set.

An ER diagram shows the relationship among entity sets. An entity set is a group of similar entities, and these entities can have attributes. In terms of DBMS, an entity is a table or attribute of a table in database, so by showing relationship among tables and their attributes.

ER diagram shows the complete logical structure of a database. Let's has a look at a simple ER diagram to understand this concept. TEACHER RECORD MANAGEMENT SYSTEM 8 DEPT OF COMPUTER APPLICATION-RNSFGC

ER Notation

There is no standard for representing data objects in ER diagrams. Each modeling methodology uses its own notation. The original notation used by Chen is widely used in academics texts and journals but rarely seen in either CASE tools or publications by non- academics. Today, there are a number of notations used, among the more common are Bachman, crow's foot, and IDEFIX.

All notational styles represent entities as rectangular boxes and relationships as lines connecting boxes. Each style uses a special set of symbols to represent the cardinality of a connection. The notation used in this document is from Martin.

The symbols used for the basic ER constructs are:

- **entities** are represented by labeled rectangles. The label is the name of the entity. Entity names should be singular nouns.
- **relationships** are represented by a solid line connecting two entities. The name of the relationship is written above the line. Relationship names should be verbs
- **attributes**, when included, are listed inside the entity rectangle. Attributes which are identifiers are underlined. Attribute names should be singular nouns.
- **cardinality** of many is represented by a line ending in a crow's foot. If the crow's foot is omitted, the cardinality is one.
- **existence** is represented by placing a circle or a perpendicular bar on the line. Mandatory existence is shown by the bar (looks like a 1) next to the entity for an instance is required.

4. Technologies to be used

4.1 Software Platform

        A) Front-end   :   HTML, CSS, Bootstraps, JavaScript

        B) Middle Ware   :   PHP

        C) Back-end   :   MySQL Server

        D) Editor   :   Visual Basic Code

        E) Browser   :   Microsoft Edge

        F) Local Web Server :   XAMPP

4.2 Hardware Platform

        RAM   :   8gb

        Hard Disk   :   512gb

        OS   :   11

        Processor   :   i5 8gen

        Browser   :   Microsoft Edge

5. Advantages of this Project

The implementation of a Teacher Record Management System offers several advantages for both individuals and schools:

For Individuals

1. Convenient Teacher Search: Individuals can easily search for and find suitable teachers based on various criteria such as subject, qualification, experience, and location.

2. Comprehensive Teacher Information: The system provides detailed profiles of teachers, including their qualifications, experience, teaching methodology, and student feedback, enabling individuals to make informed decisions.

3. Improved Learning Outcomes: By connecting individuals with qualified and experienced teachers, the system contributes to better learning outcomes and academic success.

For Schools & Colleges

1. Centralized Record Management: Schools can maintain a centralized database of teacher records, ensuring accurate and up-to-date information about their teaching staff.

2. Efficient Teacher Allocation: The system helps schools assign teachers based on their qualifications, subject expertise, and availability, optimizing the utilization of teaching resources.

3. Performance Tracking: Schools can monitor and evaluate teacher performance using the system's reporting and analytics tools, identifying areas for improvement and professional development.

4. Time and Cost Savings: By automating various administrative tasks related to teacher records, the system helps schools save time and reduce costs associated with manual record-keeping.

For the Education Sector

1. Improved Data Accuracy: The use of a centralized system ensures consistent and accurate data collection, enabling better decision-making at the sector level.

2. Enhanced Transparency: The system promotes transparency in teacher recruitment, allocation, and performance evaluation, contributing to a more equitable education system.

3. Data-Driven Policymaking: The availability of comprehensive teacher data through the system can inform policymaking and help develop targeted interventions to improve teacher quality and student outcomes.

By leveraging the advantages offered by the Teacher Record Management System, individuals, schools, and the education sector as a whole can benefit from improved efficiency, better decision-making, and enhanced educational outcomes.

act the system's effectiveness and the realization of its intended benefits.

6. Future Scope and further enhancement of the Project

o   To create student and parent module. The creation of student and parent module allows the students and the parents to take advantage of the project and allows them to see the necessary information.

o   To add attendance details to the required modules. The addition of the attendance module increases the use of the program more, as the students can view their real-time updated attendance list.

o   To add fees payment system. The fees module allows the student to pay or see the due fees amount, this module allows the parents or students to easily pay the fees.

o   To add students marks list. This module allows the students to see their marks, this allows the teachers to easily announce the marks to the students, as its easy to update the students marks in the program

9. Conclusion

This Application provides an online version of Teacher Record Management System which will benefit the school who want to maintain records of teacher and also help to person who search teacher according to his/her requirement. It makes entire process online and can generate reports. The Application was designed in such a way that future changes can be done easily. The following conclusions can be deduced from the development of the project.

• Automation of the entire system improves the productivity.

• It provides a friendly graphical user interface which proves to be better when compared to the existing system.

• It gives appropriate access to the authorized users depending on their permissions.

• It effectively overcomes the delay in communications.

• Updating of information becomes so easier.

• System security, data security and reliability are the striking features.

• The System has adequate scope for modification in future if it is necessary.
